

MOTORIZED EVACUATION CHAIR

The comprehensive evacuation solution

EVACUATION CHAIR - The **Motorized Evacuation Chair** is used to evacuate elderly, pregnant women and differently abled individuals through the staircase in highrise buildings during any emergency when the lifts are generally grounded. The belt is motorized and controlled to take the chair up and down staircases without any external support and has a light to provide proper vision in evacuation scenarios. Chair can move effortlessly on wheels over flat surfaces and glides down using a high friction and ridged belt drive. It has liftable handles to pick up the chair in required situations. There is maximum comfort and safety with an adjustable headrest, arm rest, foot rest, harness straps and cushioned seating. The maximum load capacity for the chair is 200kg and the battery can be used to travel upto 200 flights of stairs.
