

# FOLDABLE STRETCHER WITH O2 KIT

Most people work in offices located in high rise buildings today. However many of the lifts in these buildings cannot accommodate a stretcher in case of high-rise medical evacuations. Therefore, it is critical that the casualty must be administered with oxygen while being moved quickly and securely to the ground floor or to the hospital.

Our product can facilitate easy evacuation as it can be fitted with an O2 kit which can provide oxygen supply on the move. In tricky evacuations involving stairs, there is a risk of the patient slipping downwards from the stretcher and further injuring themselves. To avoid such accidents, we have added a foot pouch which prevents such accidents from occurring.

## KEY FEATURES

- Flexible holder pouch to hold the RESGUARDO oxygen kit securely.
- Foot pouch to hold and lock the feet of the victim.

# FOLDABLE STRETCHER
